

WEEKLY DRILLING REPORT OCTOBER 27, 2022

WELL: South Akcakoca-2

- Spudded September 19th; days since spud = 38
- Measured depth = 2826 metres; True vertical depth = 1544 metres – Total depth reached October 15th

Week Summary:

Detail log evaluation – Company/Partner pick first set of perforation intervals – Prepare Rig for well completion

1. Run cement bond log to make sure good cement behind casing.
2. First part of week the casing inside was cleaned and tested
3. RIH w/4 ½" tubing + Completion BHA
4. Preparations for perforations continue

Further Activities:

1. On Saturday morning (Istanbul Time) there will be perforation of the first sands to produce.
2. After the cleaning flow the well will be put on production immediately
3. The Rig will skid over about 3 metres on the Akcakoca Platform and start the recompletion of the Akcakoca-3 well.

It might seem that it is taking a long time between South Akcakoca-2 TD to its completion. There are really several steps that must be done, in general they are (just using the drilling mud as an example).

1. Prepare the borehole for the completion process, remove all the drilling mud out of the borehole, remove any other fluids, any metal fragments, pressure testing etc.
2. Get all the completion and production items to the RIG (4 ½" tubing, all down hole tools needed), room had to be made on the floor for it.
3. Convert the RIG from drilling mode to completion mode, one example is the drilling mud, that must be taken off the RIG and completion fluid brought onto the RIG.
4. Many details need to be evaluated and tested as once the zone is perforated and the natural gas flows into the well then there will be high pressure at the wellhead which needs to be under control. So, everything must have been done to ensure it is isolated and the gas only flows where we want it to flow.

Finally, since we changed the RIG from drilling to completion (most of drilling equipment sent to shore) the RIG can now just skid over and recomplete the Akcakoca-3 well.

Trillion Energy is an international gas and oil producer. The Company has a simple clear strategy to add value to shareholders by developing extremely profitable proven non-produced gas reserves on the SASB gas field through existing infrastructure and facilities commencing 2022.
